

MADERA COUNTY
TRAFFIC MONITORING PROGRAM

2022 TRAFFIC VOLUMES REPORT

JANUARY 18, 2023

INTRODUCTION

The Madera County Transportation Commission (MCTC) is the Regional Transportation Planning Agency (RTPA) and the designated Metropolitan Planning Organization (MPO) for Madera County. The Madera metropolitan boundary covers the entire County of Madera. The MCTC is responsible for the development and adoption of the Regional Transportation Plan and Transportation Improvement Program as required by state law.

The MCTC's role is to foster intergovernmental coordination; undertake comprehensive regional planning with an emphasis on transportation issues; provide a forum for citizen input into the planning process; and to provide technical services to its member agencies. In all these activities the MCTC works to develop a consensus among its members with regards to multi-jurisdictional transportation issues.

The Madera County Traffic Monitoring Program – 2022 Traffic Volume Report has been developed as part of the Fiscal Year 2022/23 Overall Work Program (OWP) of the MCTC. A traffic monitoring report is published annually to provide current traffic count information for planning and engineering projects. The objective is to maintain the Madera County Traffic Monitoring Program as a source of current traffic information for use by local agencies, Tribal Governments, and the public, and as a validation tool for the county-wide traffic model and vehicle-miles-traveled (VMT) monitoring requirements.

PURPOSE OF TRAFFIC COUNTS

The MCTC's Traffic Monitoring Program is a beneficial data source for both public and private interests. Some of the typical uses are:

Air Quality Monitoring - Federal regulations require that an air quality planning program be established. Traffic counts can identify vehicle types, speeds, and volumes to aid in determining levels of pollutants and their sources.

Transportation Modeling - The MCTC maintains a regional traffic simulation model to assist in air quality and transportation planning. This model is dependent upon current and accurate traffic counts to aid in future transportation and development planning.

Traffic Signal Priorities and Capital Improvement Programs - Each year agencies develop budgets for projects and improvements for the next fiscal year. Since funds are limited, project priorities must be set. Traffic counts assist in setting those priorities.

Other Benefits Derived from Traffic Counts - Regular monitoring of traffic volumes assists in the determination of growth rates, traffic accident rates, traffic signal and stop sign warrants, optimization of traffic signal timing, and traffic noise levels.

Private Use - Traffic counts are of service to private business. Uses include determination of location and economic potential of a proposed business. Likewise, traffic count data offer substantial benefits to real estate appraisal and financing decisions.

TRAFFIC COUNTING METHOD

The 2022 traffic count locations were determined by the MCTC with input from its member agencies. The 2022 traffic volumes were obtained utilizing pneumatic traffic counters installed at each count location for a continuous 24-hour period.

TRAFFIC COUNT DATA

In addition to the current year 2022 traffic counts, this report also contains traffic count information dating back to 2017 obtained from previous Madera County Traffic Volume Reports. The data are attached and are separated based on the jurisdiction of the roadway. Traffic count data within the four jurisdictions listed below are included in this report:

- County of Madera
- City of Madera
- City of Chowchilla
- State of California (Caltrans)

The traffic counts presented for the County of Madera, City of Madera, and City of Chowchilla are “raw” counts. A “raw” count is recorded at a particular location on a particular day for a period of 24 hours and is not adjusted to reflect seasonal variations or daily variations normally occur. While “raw” counts provide a good measure of traffic activity at a given location, caution must be exercised in the use of this information. Also, many of the counts are “directional” (i.e. eastbound, westbound, etc.). To obtain the total traffic volume for a location, the traffic volumes in both directions must be added together. The raw traffic count data sheets for the 2022 traffic counts are attached.

The Caltrans data contains the most recent (year 2020) Average Daily Traffic (ADT) counts calculated by Caltrans. Year 2021 and 2022 data have not yet been made available by Caltrans. As of the date of this report, the Caltrans traffic counts are available at the following internet address: <http://dot.ca.gov/trafficops/census/>
